A931 / A941

Weapon Day Sight

In high-tempo combat, the window for engagement is often defined by the speed of visual confirmation. The A931/A941 series is engineered to master this moment, featuring an exceptionally large exit pupil that enables instantaneous target acquisition even under extreme physiological stress. By combining precise reticle brightness control with an integrated honeycomb filter to negate lens glint, these day sights provide a discreet yet dominant visual advantage. It is a system designed for operators who refuse to trade speed for precision in the heat of contact.

A ruggedized, high-performance day sight series optimized for rapid fire and long-term reliability. With a focus on superior light transmission and standardized weapon integration, the A931/A941 provides a stable, low-profile aiming solution that excels across the full spectrum of environmental and tactical challenges.

General Specifications

Rapid Target Acquisition: Optimized for high-speed engagement through a large exit pupil design and adjustable reticle luminosity for varying light conditions.

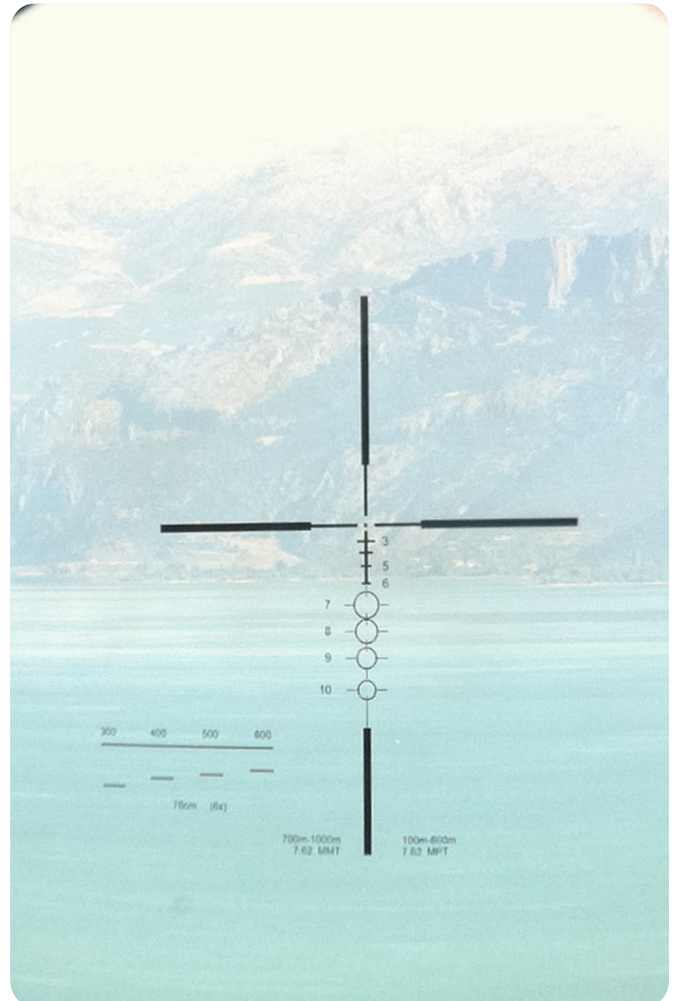

Tactical Stealth: Equipped with an integrated honeycomb filter to eliminate objective lens reflections, maintaining operator concealment in high-visibility environments.

Combat-Proven Resilience: Fully compliant with MIL-STD-810G standards, offering wide-range thermal stability (-32°C to +55°C) and certified submersible performance.

Technical Specifications

- Magnification : 3X / 4X
- Field of View : 7° / 5.25°
- Pupil Exit (min.) : 6,5 mm
- Eye Relief : 65 mm
- Reticle : Balistic
- Reticle Adjustment : 1 cm @ 100 m
- Reticle Brightness : 10 Level
- Battery : CR2032
- Weight : 420 gram (with weapon mount)
430 gram (with weapon mount)
