ARN12K

Reflex Sight

The ARN12-K redefines tactical endurance by synthesizing high-speed reflex acquisition with intelligent power management. Engineered for dynamic theaters, this system leverages an integrated kinetic sensor to ensure the optic is active only when required—extending operational autonomy without compromising response latency. It represents a sophisticated balance of electronic efficiency and uncompromising optical clarity.

A motion-activated, parallax-free reflex sight designed for high-intensity small arms engagement. By bridging the gap between sustained battery longevity and instantaneous combat readiness, the ARN12-K provides a robust aiming platform optimized for 24/7 multi-environment operations.

General Specifications

Intelligent Power: Motion-sensor-activated power saving ensures immediate readiness while maximizing field autonomy.

Operational Continuity: Full NVD compatibility and variable brightness levels for seamless 24/7 engagement.

Ruggedized Integrity: MIL-STD-810G certified protection against extreme temperatures (-32°C to +55°C) and water immersion.

Technical Specifications

- Magnification : 1x
- Window Size : 17.5 mm
- Dot Size : 3 MOA
- Dot Movement : 1/3 MOA / click
- Dot Total Movement : Windage : ±60 MOA / Elevation : ±60 MOA
- Dot Brightness : 11 Levels
- NV Compatibility : Yes
- Power Save Mode : Yes
- Battery : CR2032
- Weight : 125 gram [w/o adapter]
- Dimensions : 48 x 72 x 42 mm
